

Evolving **Critical Communications**  
with **IPRS Connect**

# Evolution of interoperability

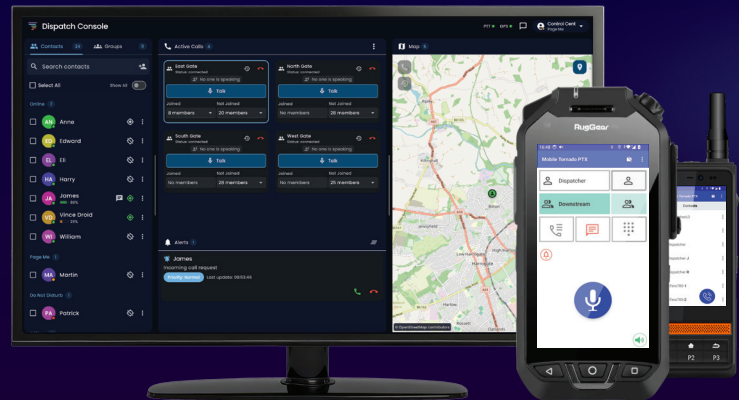

Mobile Tornado's IPRS Connect is transforming critical communications by seamlessly connecting modern and legacy systems.

Built for maximum integration, it enables direct communication between Push-to-Talk over Cellular (PoC) users and traditional Land Mobile Radio (LMR) networks - including DMR, TETRA, and P25. This allows organisations to unify their communications without replacing existing infrastructure, ensuring seamless voice and group communications across all devices and networks.

Interconnect LTE/WiFi PoC users with LMR.

Enable cross platform voice and group communications.

Integrate into PABX SIP phones for one-to-one calls.

# Industry sectors / use cases

Whether deployed in high-pressure, time-critical sectors or used to enhance coordination in large-scale logistics and infrastructure, our systems deliver secure, low-latency communication that meets the demands of modern industries.

Industry sectors include:

Public safety

Transport  
& Rail

Utilities  
& Energy

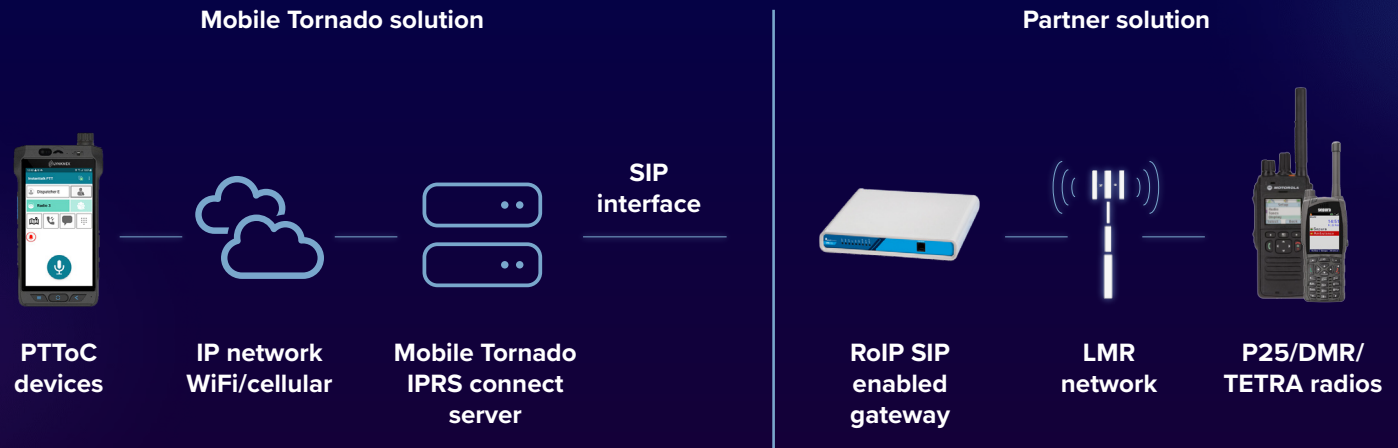

Government  
& Defence

# How our technology works

Our IPRS Connect technology leverages IP networking to enable instant, reliable voice communication between users, integrating seamlessly with an existing infrastructure and supporting a wide range of devices and deployment scenarios.

- Fast and secure integration to third party LMR infrastructure.
- IPRS integration options include, **CSSI** or **ISSI** into P25 and **AIS** into DMR.
- Multi talk group mappings without donor devices.

# Ready to bridge your network?

Bring seamless integration to your radio and broadband communications. Deploy the IPRS SIP solution to futureproof your operations.
